

ANDREW DO DOCTORAL THESIS

IAN KATZ | MASON CHEN | DOTUN LYTTON | BENNY CHEN | CAL ANSWERS

Introduction

- Cal Answers
- Graduation, GPAs, Applicant Data

How We Dealt with the Data

- Data came from the Cal Answers website <http://calanswers.berkeley.edu> (requires a Berkeley login or permission from the school)
- Cal Answers is composed of various Dashboards, which can be exported into .csv files
- While getting the data into a table is easy, the data needs to be wrangled before any interesting trends show up

Ethnic Makeup of Berkeley

How Fast are People Graduating?

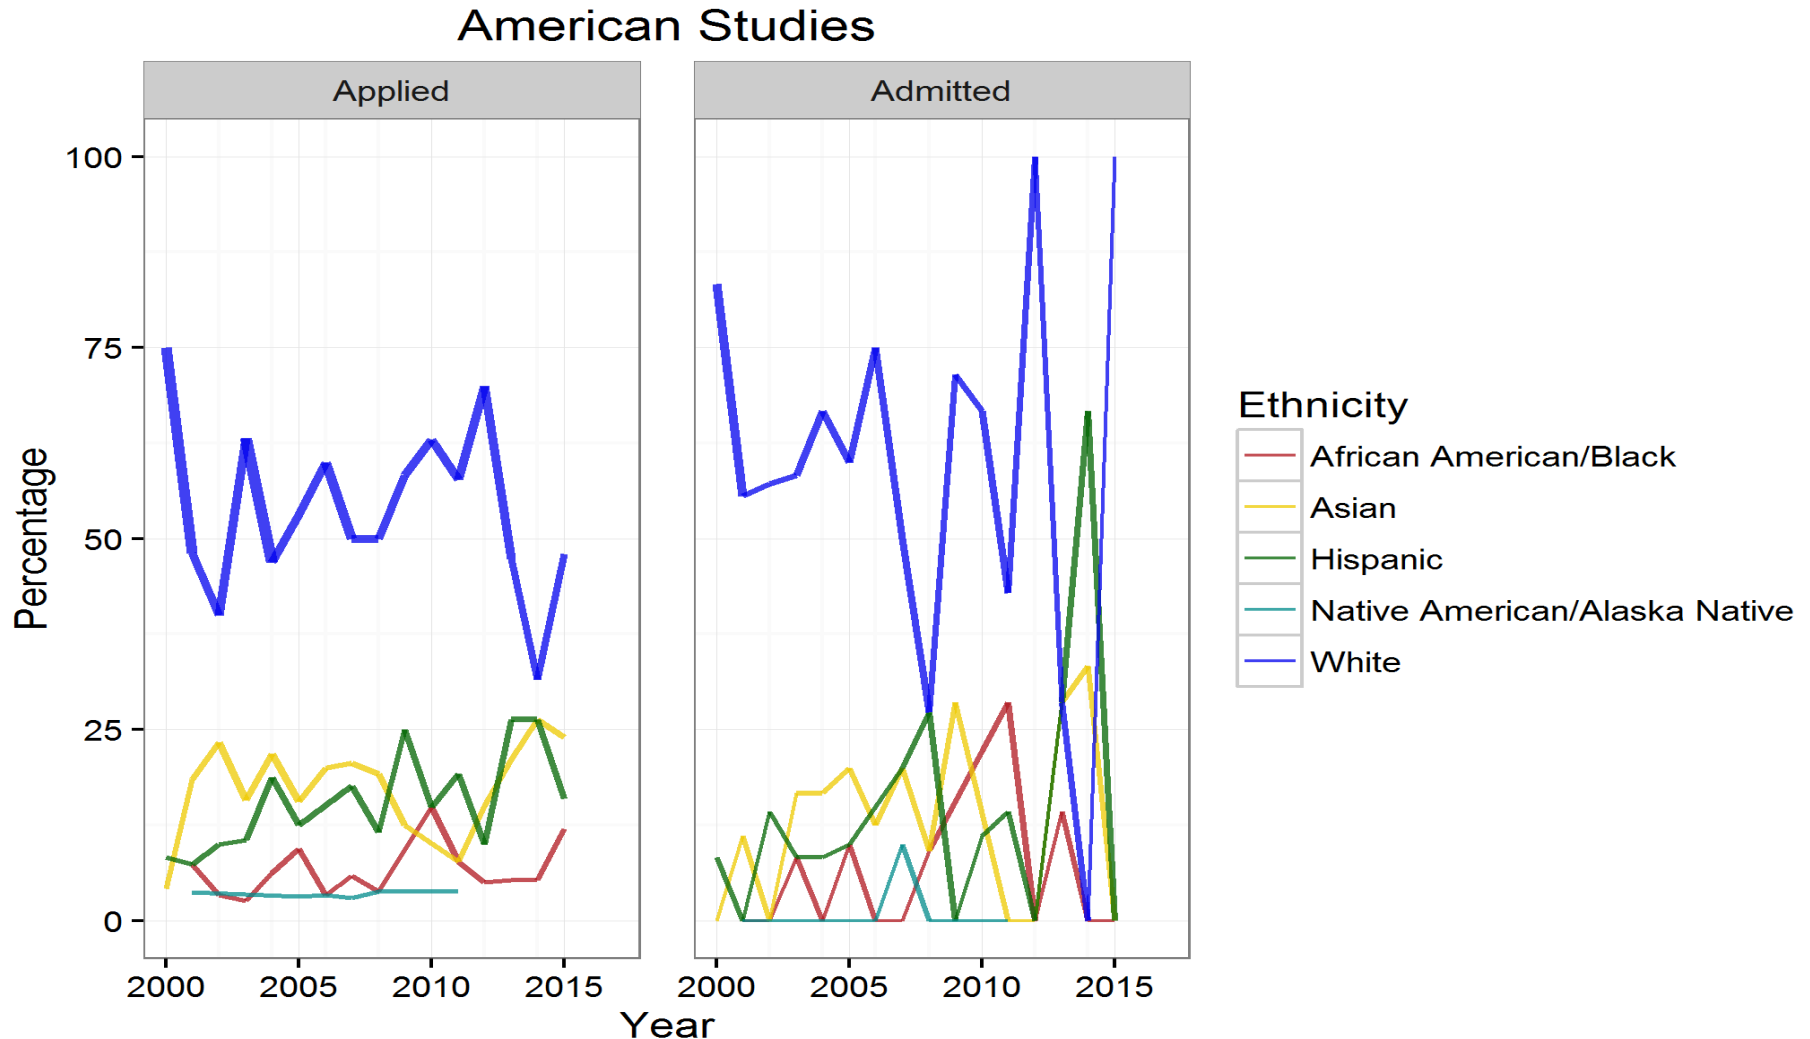

How Fast are People Graduating?

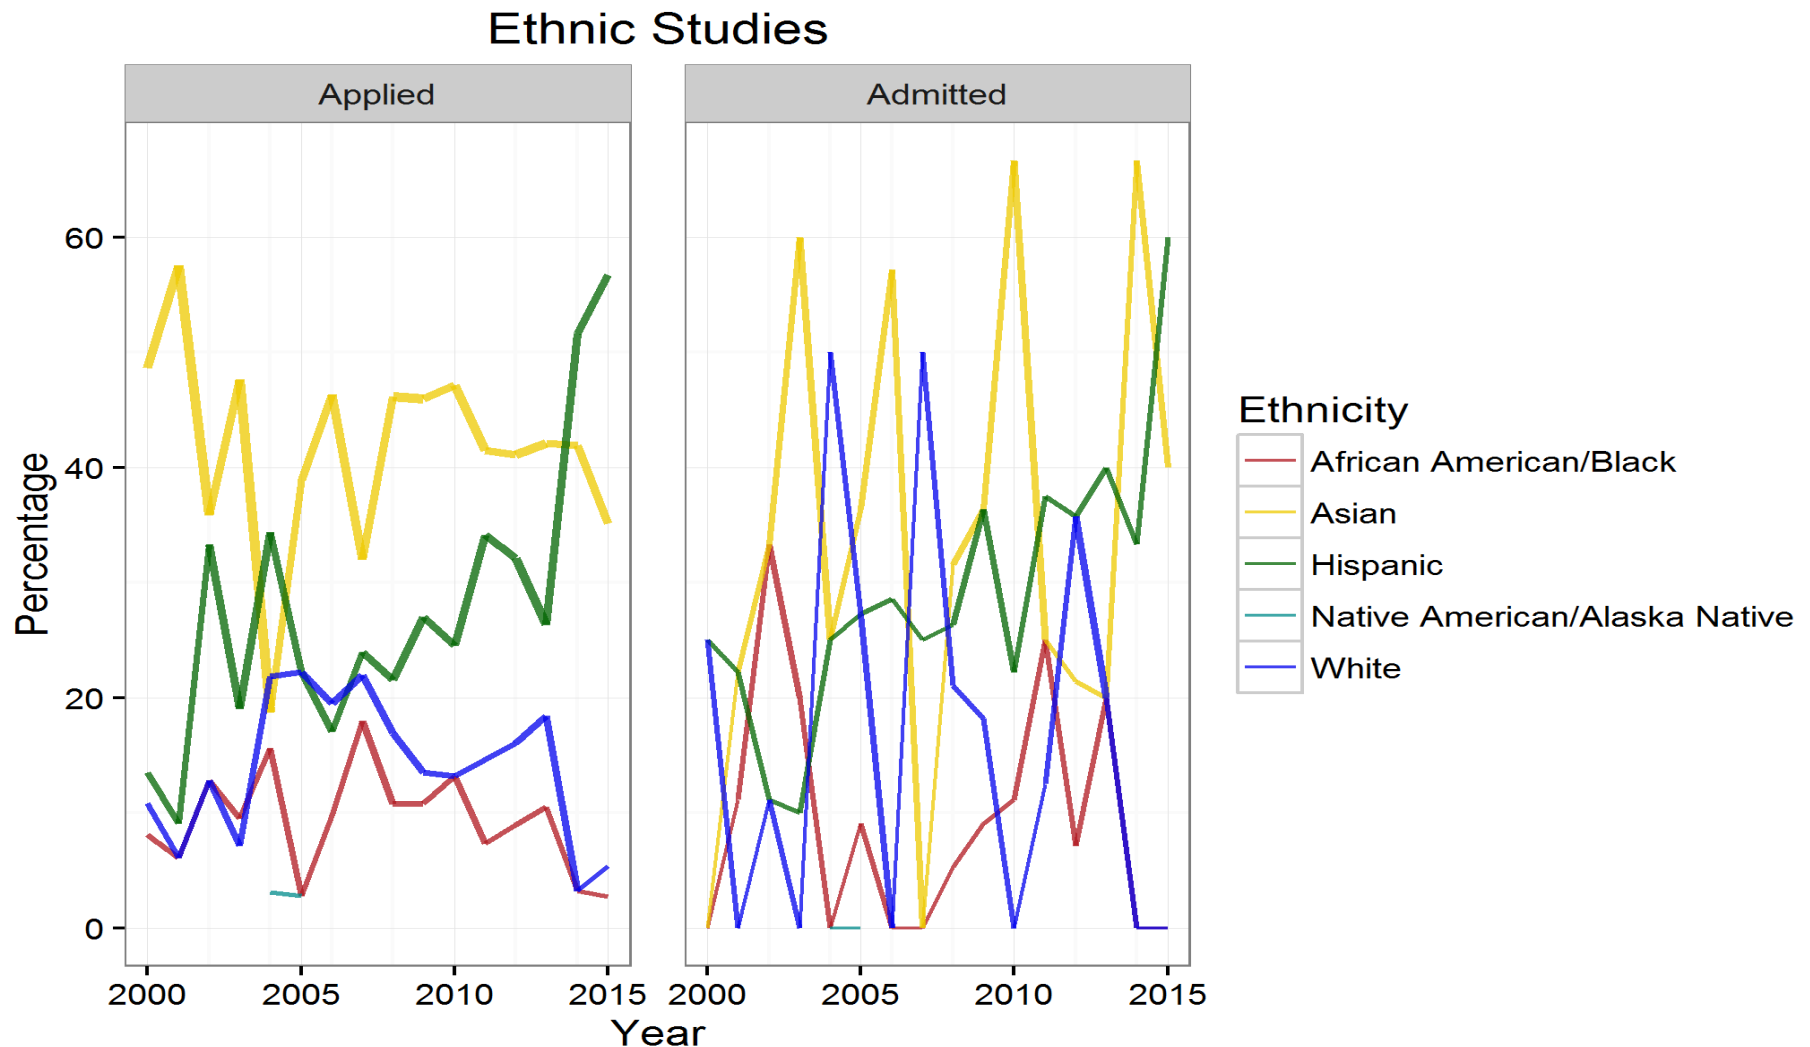

How Fast are People Graduating?

Who's Studying American Studies?

Who's Studying Ethnic Studies?

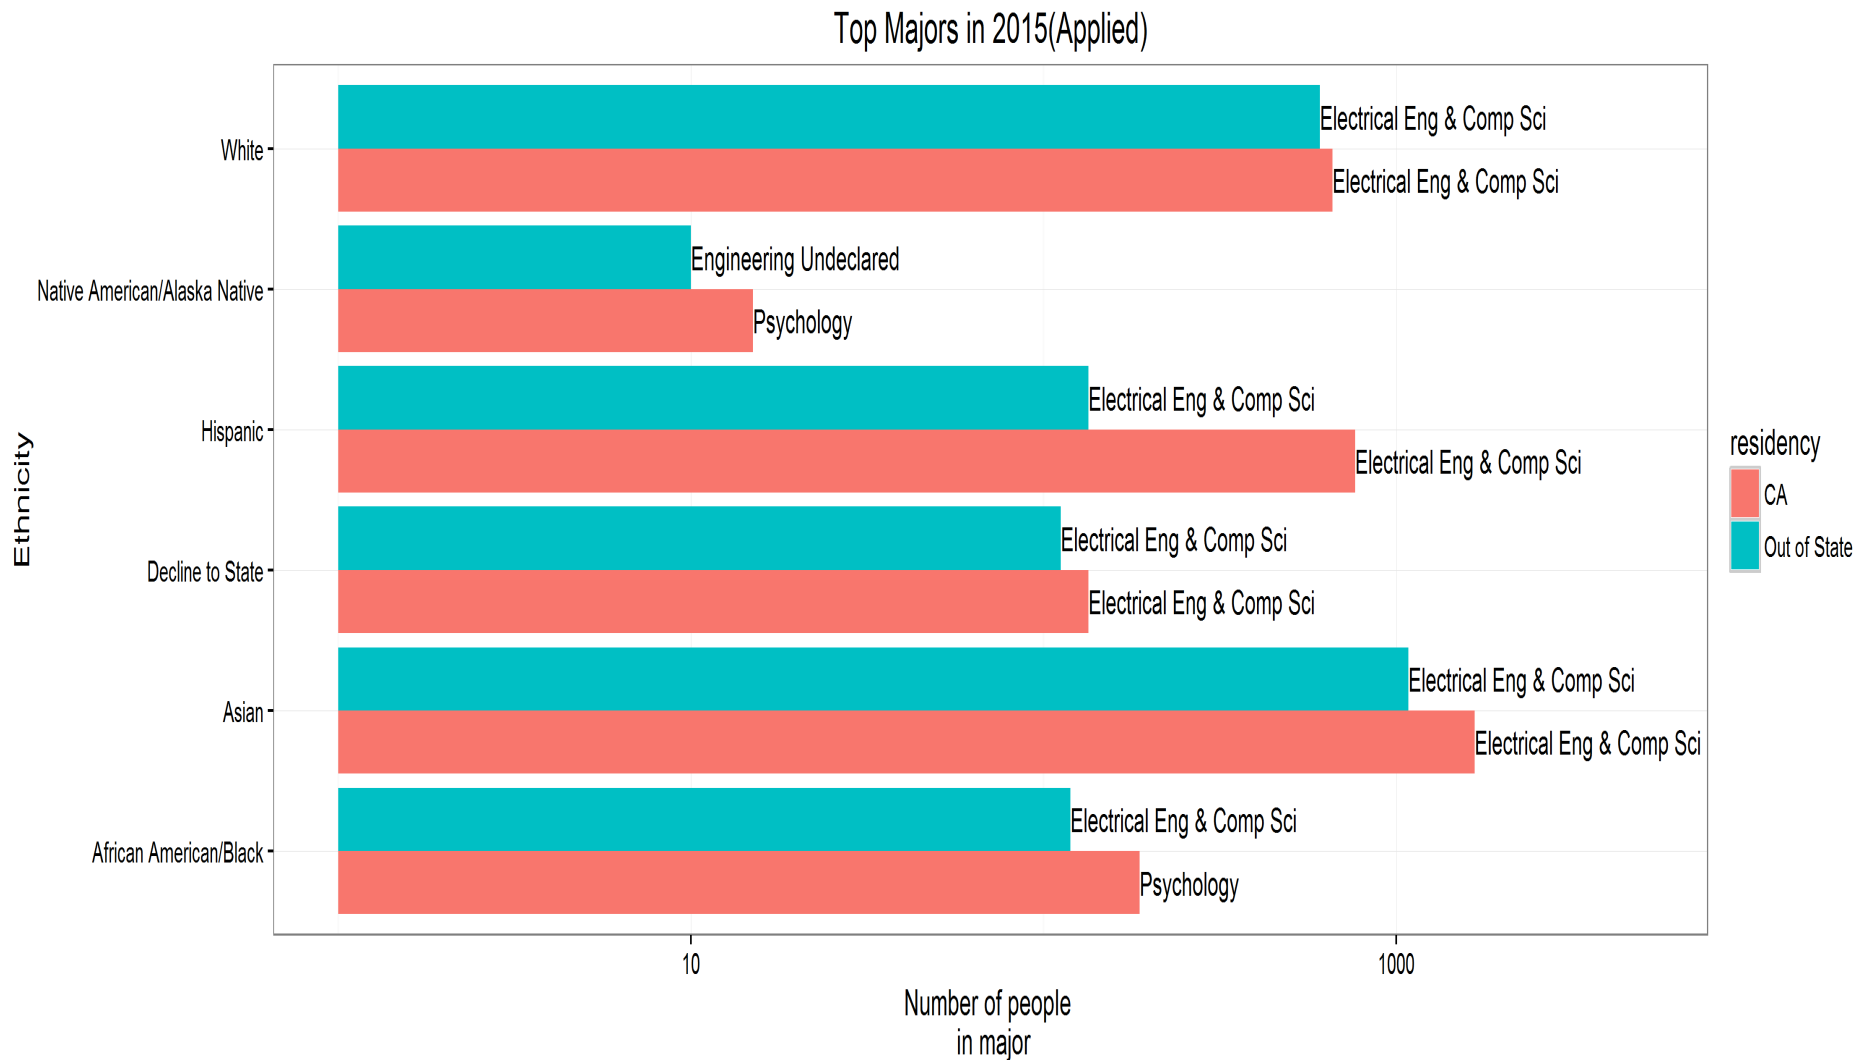

Vs African American Studies

Top Majors

Top Majors

Departments with Lowest GPAs

- GPA calculation: A+ - 4.3 grade points
- Grades aggregated from 2010 school year to present (18 semesters, including summer)
- Biology 2.84, Statistics 2.88, Neuroscience 2.93, Mathematics 2.94, Physics 2.96
- Pass rate: Cuneiform 0.33, Biology 0.47, Sanskrit 0.5, Neuroscience 0.61
- What about highest GPAs?

Departments with Highest GPAs

- Dominated by language departments
- Average class size across departments:
7826.204
- Filipino 1200, Korean 4278, Art Practice 7117
- Iranian 7, Creative Writing 39, Semitics 13

Policy Changes: CS Dept

- CS 4th largest department
- GPA requirement has varied from 2.0 to 3.5+, with the late 80's and late 90's being the most competitive.
- After the dotcom bubble burst, numbers waned and the GPA was adjusted accordingly until it was removed altogether in 2007.
- Spring 2014-Fall 2015: 3.0 GPA cap

GPA and Number of Students across Semesters

The red line represents when the GPA cap was implemented

GPA and Number of Students in Upper Divs
across Semesters

The red line represents when the GPA cap was implemented

Conclusions

- Trends in the world economy can have an impact on who is admitted, what majors are chosen, and how fast people graduate
- The composition of intended majors can differ in terms of ethnic makeup.
- Policy changes are appropriate for limited resources and for growing student interest in computer science

Limitations

- While some Dashboards go as far back as 1983, some only contain a few years worth of data
- The data is split up over many tables, so it is not always possible to directly compare two variables with each other

Future Studies

- Access to the restricted data sets, incorporating data from outside sources, and finding other ways to categorize the student body would allow for a more full exploration of the questions that we addressed
- What do people think are the hardest/easiest (maybe say "highest/lowest grades") classes on campus? Within their major? How well does this match up with reality?
- What percentile do you need to be at to get a certain letter grade for a given class?
